

Rishik Reddy Yesgari

(848) 336-5576 | Edison, NJ | rishikreddy.yesgari@gmail.com | [/in/rishikreddyyesgari](https://in/rishikreddyyesgari) | rishik-y.tech

EDUCATION

Bachelor of Science in Computer Science

New Jersey Institute of Technology

September 2023 - Expected December 2026

Newark, NJ

- **GPA:** 3.824 | **Awards:** Dean's List, Highlander Achievement Scholar, Grace Hopper Research Grant
- **Certifications:** AWS Machine Learning Associate | Microsoft Azure Data Scientist Associate | Cornell University ML Certificate

SKILLS

Programming Languages: Python, SQL, JavaScript, C++, Java

Data Science: Pandas, NumPy, Feature Engineering, Data Cleaning, Model Evaluation, Probability, Statistics, Linear Algebra

Machine Learning: Scikit-learn, PyTorch, TensorFlow, OpenCV, Time-Series Data, Survival Modeling

Cloud & Databases: AWS, SageMaker, Azure ML, PostgreSQL, MongoDB, Neo4j

Visualization & Tools: Tableau, Git, Docker, Linux

PROFESSIONAL EXPERIENCE

AI Engineering Intern

Dimension Consulting

June 2026 – Present

Edison, NJ

- Developed proficiency in NetSuite ERP by completing implementation-focused training across procure-to-pay, order-to-cash, role-based accountability, and client ERP workflows.
- Contributed to agentic AI system components for NetSuite and ERP automation by using Amazon Bedrock, Strands Agents, Python, AWS SDK, and React to connect business workflows with AI-driven actions.

Undergraduate Research Assistant

Department of Data Science, NJIT

August 2025 – April 2026

Newark, NJ

- Built modular Python pipelines with Pandas and NumPy to ingest, clean, and prepare large-scale time-series datasets across 20+ real-world datasets.
- Developed automated training and evaluation workflows across 10+ models, improving repeatability and comparison of machine learning results.
- Reduced end-to-end experimentation runtime by 75% by parallelizing training and evaluation workloads using multiprocessing.
- Presented this research at the NEBEC Conference, delivering a technical talk on scalable time-series machine learning workflows and model evaluation.

AI and ML Intern

Chambers Capital Ventures | Break Through Tech @ Cornell Tech

June 2025 – December 2025

- Developed a predictive machine learning pipeline to assess founder grit using large-scale behavioral survey data, supporting data-driven investor decision-making.
- Performed feature analysis and selection to reduce 60+ features to 15 meaningful features used for downstream modeling, improving model usability and signal quality.
- Presented model outputs and feature insights to stakeholders through a stakeholder-facing application, enabling discussion, comparison, and refinement of predictive findings.

PROJECTS

WiDS Global Datathon 2026 - Wildfire Time-to-Threat Prediction (3rd place) | Python, LightGBM, XGBoost, CatBoost, Survival Modeling

- Placed 3rd worldwide among 1,700+ teams by building a horizon-specific ensemble using gradient boosting, survival modeling, feature engineering, and model evaluation to predict wildfire threat probabilities across 12 to 72-hour horizons.
- Engineered 80+ distance, movement, fire growth, alignment, and ETA features from early fire perimeter data, improving multi-horizon risk prediction with valid cumulative probabilities.

Erica - AI Tutor | Python, LangChain, Neo4j, Ollama (Qwen2.5), Docker

- Built a Dockerized AI tutoring system using entity extraction, relationship modeling, Neo4j knowledge graphs, RAG, graph traversal, and citation grounding to generate explainable responses.

QuickDraw - Real-Time Sketch Recognition System | Python, Flask, React, TensorFlow, REST APIs, MongoDB

- Trained and served a TensorFlow sketch-recognition model through Flask REST APIs, enabling low-latency model inference and real-time predictions through a React-based frontend.
