

Rishik Reddy Yesgari

(848) 336-5576 | Edison, NJ | rishikreddy.yesgari@gmail.com | [/in/rishikreddyyesgari](https://in.rishikreddyyesgari) | rishikyesgari.com

EDUCATION

Bachelor of Science in Computer Science

New Jersey Institute of Technology

September 2023 - Expected December 2026

Newark, NJ

- **GPA:** 3.824 | **Awards:** Dean's List, Highlander Achievement Scholar, Grace Hopper Research Grant
- **Certifications:** AWS Machine Learning Associate (2025) | Microsoft Azure Data Scientist Associate (2025) | Cornell University ML Certificate (2026)

SKILLS

Programming Languages: Python, Java, JavaScript, C, C++

Full Stack & Frameworks: Flask, React, REST APIs

AI & Machine Learning: Scikit-learn, PyTorch, TensorFlow, OpenCV, LangChain, RAG, Ollama, Amazon Bedrock, Strands Agents

Data Science: SQL, Pandas, NumPy, Feature Engineering, Data Cleaning, Model Evaluation, Probability, Statistics, Linear Algebra

Cloud & Databases: AWS, SageMaker, Azure ML, PostgreSQL, MongoDB, Neo4j, SQLite

Tools & DevOps: Git/GitHub, Linux/Bash, Docker, Tableau

PROFESSIONAL EXPERIENCE

AI Engineering Intern

Dimension Consulting

June 2026 – September 2026

Edison, NJ

- Built a client-facing agentic AI platform that transformed multi-person enterprise analysis into sub-2-minute self-service workflows across large enterprise databases, using 15+ specialized AI agents.
- Engineered the platform with Amazon Bedrock, Strands Agents, Python, and AWS SDK, converting natural-language requests into coordinated SQL, analytics, math, and sandboxed-code workflows.
- Redesigned the execution architecture with dependency-aware parallelism, cache/schema reuse, and targeted retries, reducing projected execution time by ~45%, while reducing redundant LLM and database operations.

Deep Learning Forecasting Research Intern

Department of Data Science (Grace Hopper AI Research), NJIT

August 2025 – April 2026

Newark, NJ

- Engineered modular Python preprocessing pipelines with NumPy and Pandas for cleaning, trimming, interpolating, and splitting 10+ multi-location epidemic datasets (900 weekly observations each) across 5 disease types.
- Developed rolling-origin forecasting and evaluation workflows across 10+ models, standardizing experimentation and model comparison across datasets and hyperparameters.
- Parallelized forecasting workloads with multi-threaded Python execution, reducing experimentation runtime by 75–80%.
- Built reusable logging and recovery utilities for automated metric collection and reproducible experiments, and presented the scalable forecasting workflow at the NEBEC Conference.

AI and ML Intern

Chambers Capital Ventures | Break Through Tech @ Cornell Tech

June 2025 – December 2025

- Engineered an end-to-end machine learning pipeline on large-scale behavioral survey data to model founder behavioral traits and support data-driven venture investment analysis.
- Performed feature engineering and selection across 60+ behavioral variables, reducing the feature space to 15 high-signal predictors and improving downstream model training and evaluation.
- Developed a stakeholder-facing application to surface model predictions and feature insights, translating ML outputs into actionable findings for investor review.

PROJECTS

WiDS Global Datathon 2026 — Watch Duty Wildfire Challenge (3rd Place) | Python, LightGBM, XGBoost, CatBoost, Survival Modeling

- Placed 3rd worldwide among 1,700+ teams, earning a \$3,000 prize by building a horizon-specific ensemble to predict wildfire threat probabilities across 12–72 hour horizons.
- Engineered 80+ distance, movement, fire growth, alignment, and ETA features, combining gradient boosting, survival modeling, feature engineering, and model evaluation for multi-horizon risk prediction.

Erica - AI Tutor | Python, LangChain, Neo4j, Ollama (Qwen2.5), Docker

- Built a pedagogical AI tutor using LangChain, Ollama, and Neo4j GraphRAG to map concept prerequisites through entity extraction, relationship modeling, and graph traversal.
- Built a Dockerized full-stack application with a Chainlit interface and backend AI-tutoring API, enabling interactive learning.
